

# **PRINCIPLES OF SUSTAINABLE FINANCE**

## **Chapter 3: Governance and behaviour**

# Overview of the book

## **Part I: What is sustainability and why does it matter?**

1. Sustainability and the transition challenge

## **Part II: Sustainability's challenges to corporates**

2. Externalities - internalisation
3. **Governance and behaviour**
4. Coalitions for sustainable finance
5. Strategy and intangibles – changing business models
6. Integrated reporting - metrics and data

## **Part III: Financing sustainability**

7. Investing for long-term value creation
8. Equity – investing with an ownership stake
9. Bonds – investing without voting power
10. Banks – new forms of lending
11. Insurance – managing long-term risk

## **Part IV: Epilogue**

12. Transition management and integrated thinking

# Learning objectives – chapter 3

- ▶ explain behavioural biases against change
- ▶ understand the changing objective of corporates
- ▶ explain the role of corporate governance steering companies behaviour
- ▶ explain how markets reinforce short-termism
- ▶ understand the design of incentives for long-term thinking

# Behavioural biases

# Linear consumption and production

Bottleneck to transition is not technical but societal:  
can we **change** our consumption and production patterns?

Overcome  
current patterns  
that **deplete**  
**natural**  
**resources**

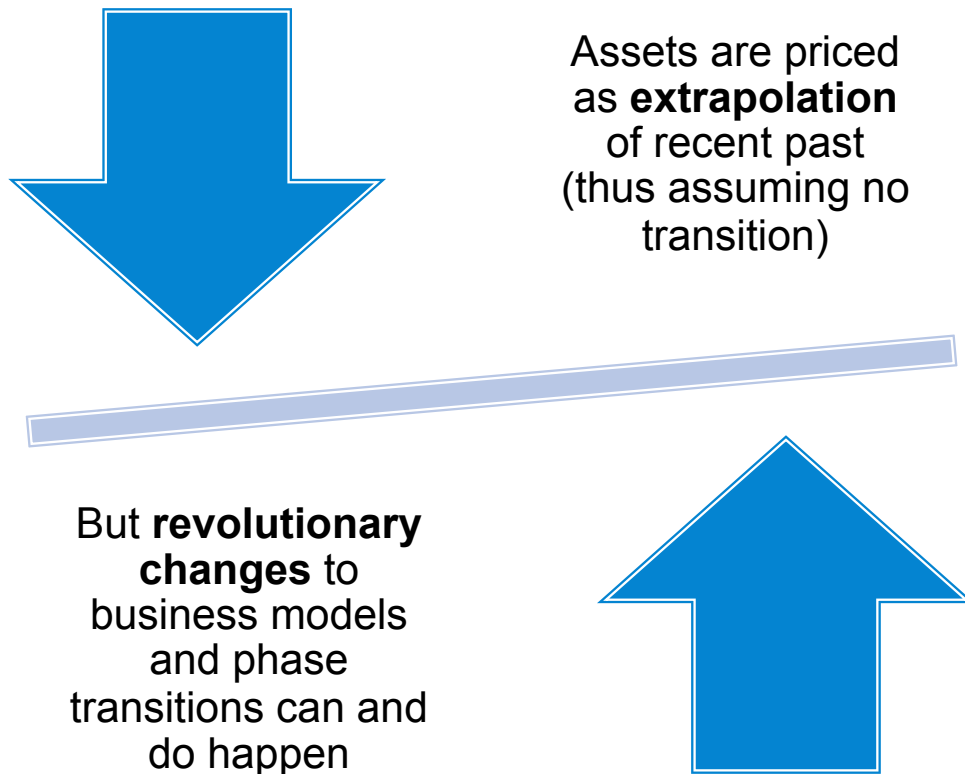

**Nudging** to new  
patterns

1. Competitive consumption (keeping up with the Joneses)
2. Linear production (take, make, use and waste)
3. Reinforced by lobby of incumbents

1. Collaborative consumption (sharing or peer-to-peer economy)
2. Circular production (renewable energy, re-use of materials)

# Investors also have behavioural biases

Scenario analysis (Chapter 2): useful tool to **broaden and lengthen the horizon**

New approaches needed:

1. From **short to long** term (this chapter)
2. From investing in the **market index** to **fundamental analysis** of investee companies (Chapter 7)

# Players in sustainability (Table 3.1)

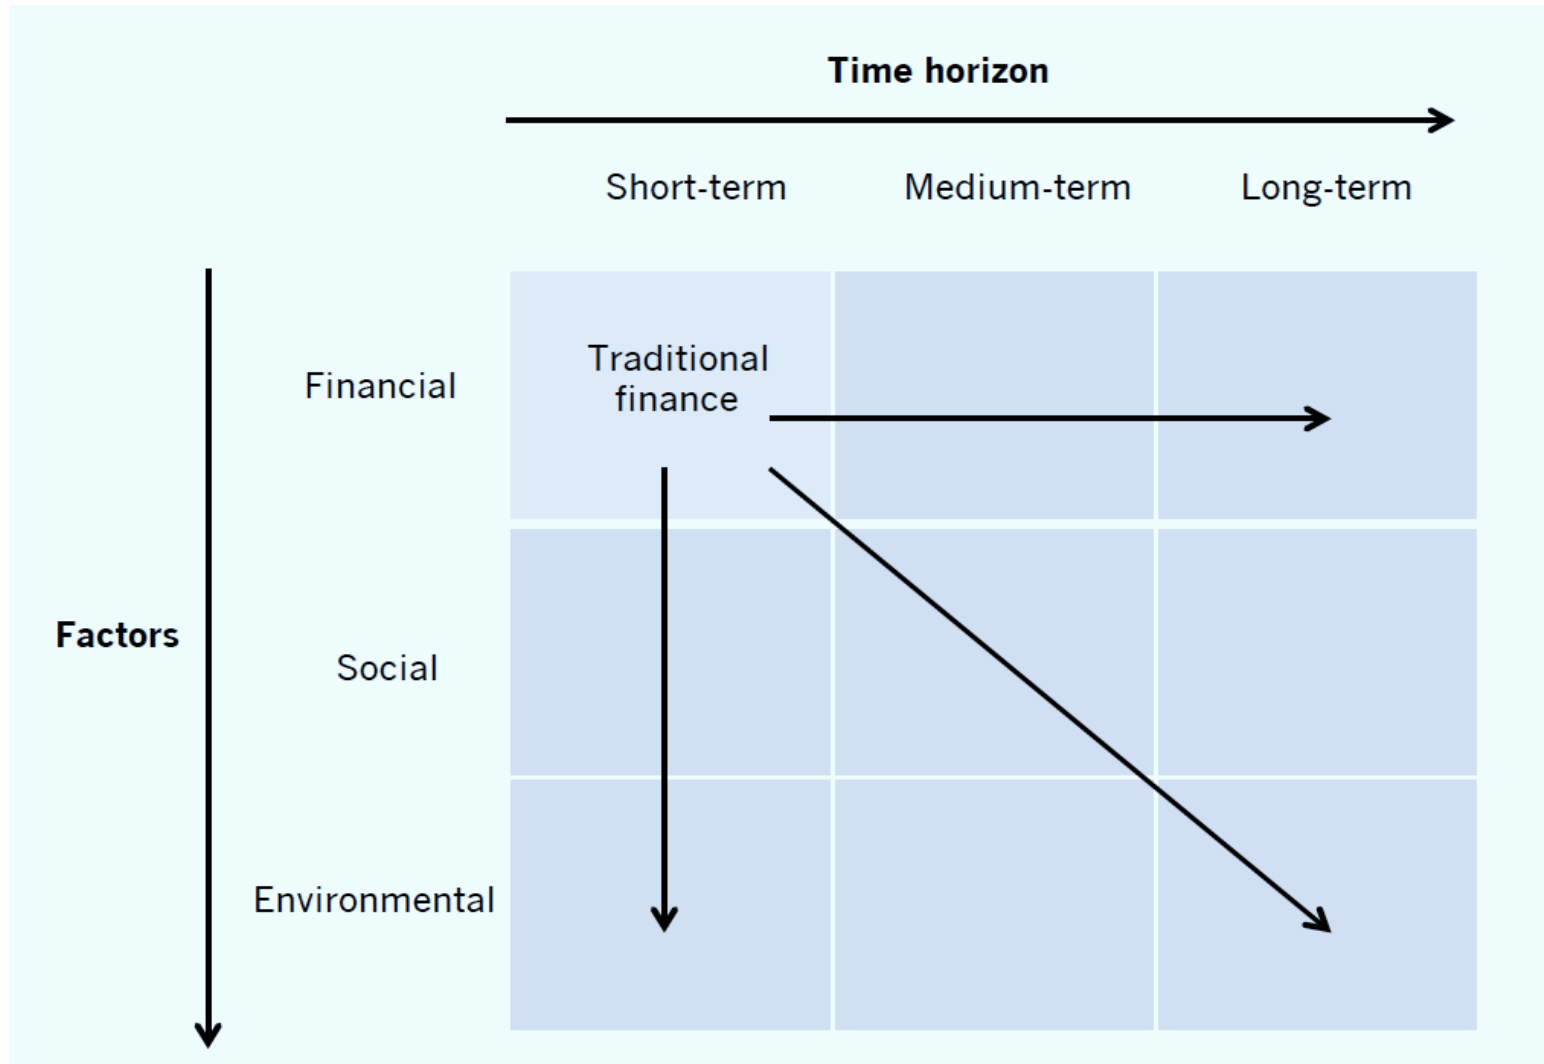

Player	Sphere of influence	Horizon	Mechanisms	Leading institutions and forums	Opportunities	Threats
Government	Country / Global	Up to 4 years	Strong leadership role <ul style="list-style-type: none"> <li>• Taxation</li> <li>• Regulation</li> </ul>	<ul style="list-style-type: none"> <li>• United Nations: Conference of Parties (COP)</li> </ul>	<ul style="list-style-type: none"> <li>• Economy wide impact</li> <li>• Public role in energy and infrastructure</li> </ul>	<ul style="list-style-type: none"> <li>• Shortfall of efforts</li> <li>• Monitoring climate pledges</li> <li>• Policy differences</li> <li>• Free rider behaviour</li> <li>• Corruption</li> </ul>
Civil society	Debate	From MT to LT	Public voice of NGOs <ul style="list-style-type: none"> <li>• Media</li> <li>• Social capital</li> <li>• Deselection</li> </ul>	<ul style="list-style-type: none"> <li>• Oxfam</li> <li>• Amnesty International</li> <li>• Greenpeace</li> <li>• WWF</li> </ul>	<ul style="list-style-type: none"> <li>• Agenda setting</li> <li>• Stimulate citizenship of investors and corporates</li> </ul>	<ul style="list-style-type: none"> <li>• Single issue</li> <li>• Fragmentation</li> <li>• Dependent on goodwill of (local) government</li> </ul>
Investors	Investments	From ST to LT	Long term investors <ul style="list-style-type: none"> <li>• Investment strategy</li> <li>• Lending strategy</li> <li>• Engagement</li> </ul>	<ul style="list-style-type: none"> <li>• PRI</li> <li>• FCLT Global</li> <li>• GINN</li> <li>• GABV</li> <li>• Equator Principles</li> </ul>	<ul style="list-style-type: none"> <li>• Stimulate corporate sustainability</li> <li>• Stewardship and engagement</li> </ul>	<ul style="list-style-type: none"> <li>• Shortfall of efforts</li> <li>• Monthly benchmarking</li> <li>• Long investment chain</li> <li>• Marking-to-market</li> <li>• Monitoring</li> </ul>

# Players in sustainability (Table 3.1 - Cont'd)

Player	Sphere of influence	Horizon	Mechanisms	Leading institutions and forums	Opportunities	Threats
Corporates	Value chain of production	From MT to LT	Key players for transformation <ul style="list-style-type: none"> <li>• Procurement</li> <li>• Production process</li> </ul>	<ul style="list-style-type: none"> <li>• WEF</li> <li>• WBCSD</li> </ul>	<ul style="list-style-type: none"> <li>• Reputation building</li> <li>• Sound and stable business practices</li> </ul>	<ul style="list-style-type: none"> <li>• Shortfall of efforts</li> <li>• Quarterly reporting</li> <li>• Shareholder value thinking</li> <li>• Lobbying for status quo</li> <li>• Reliability integrated reporting</li> <li>• Relocating production to less strict countries</li> </ul>
Households	Consumption	From ST to LT	Ultimate beneficiaries <ul style="list-style-type: none"> <li>• Buying decisions</li> <li>• Sharing economy</li> <li>• Electing government</li> </ul>	Consumer association	<ul style="list-style-type: none"> <li>• Steer corporates, utilities, housing</li> <li>• Steer investments</li> <li>• Vote for policies</li> </ul>	<ul style="list-style-type: none"> <li>• Poverty</li> <li>• Lack of trust in government</li> <li>• Environmental degradation</li> <li>• Free rider behaviour</li> <li>• Human aversion to change</li> </ul>

# Time horizon and factors in finance

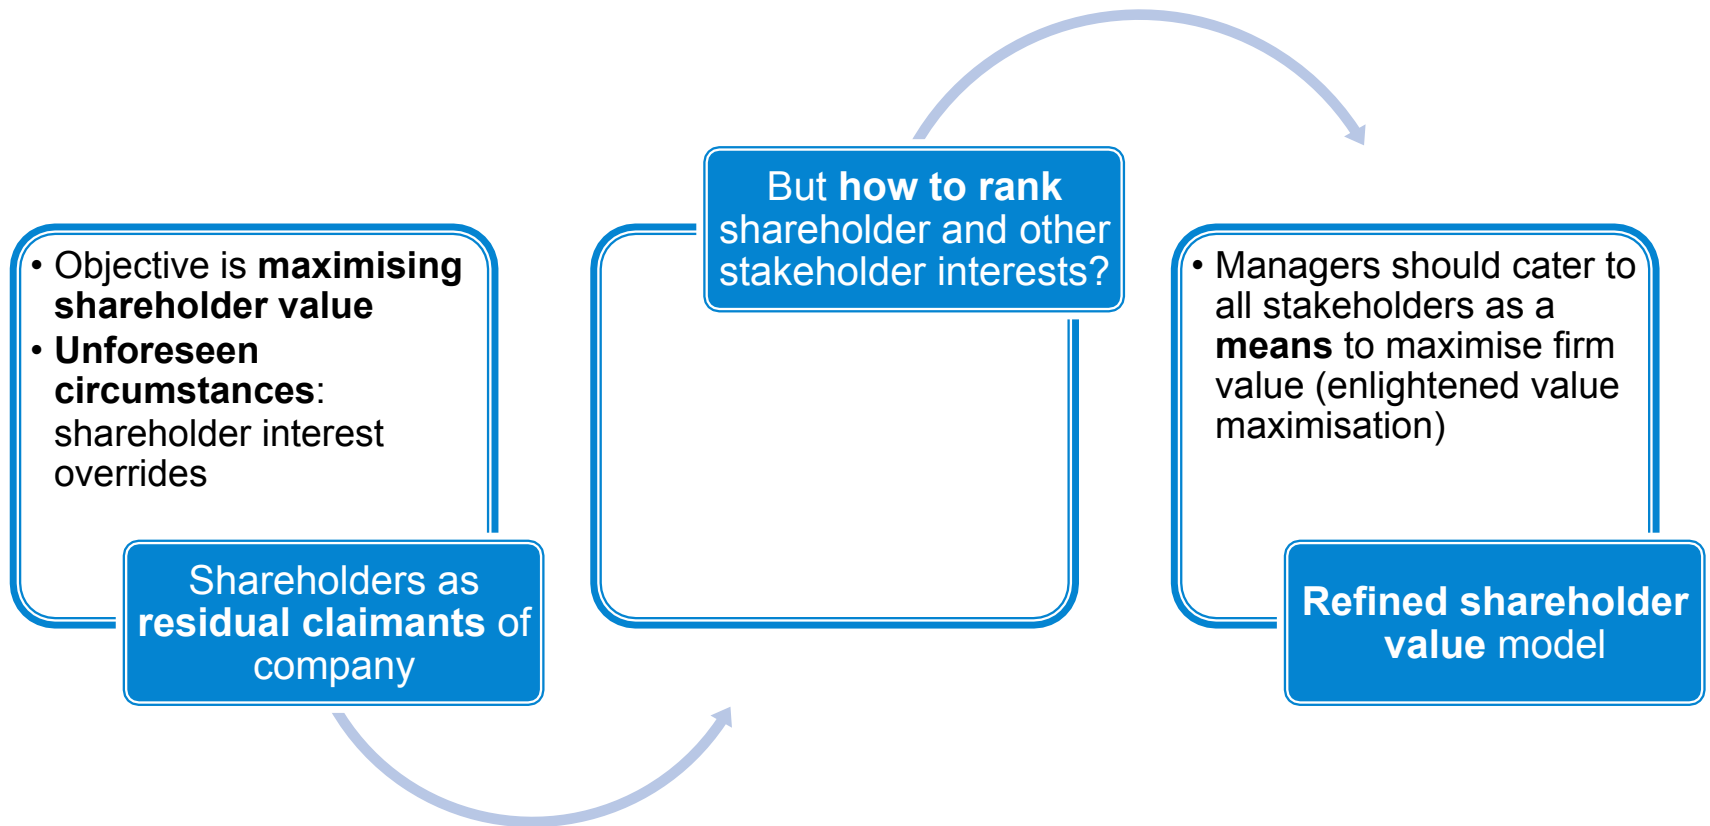

# Role of finance

How can financial firms steer business towards sustainable business practices?

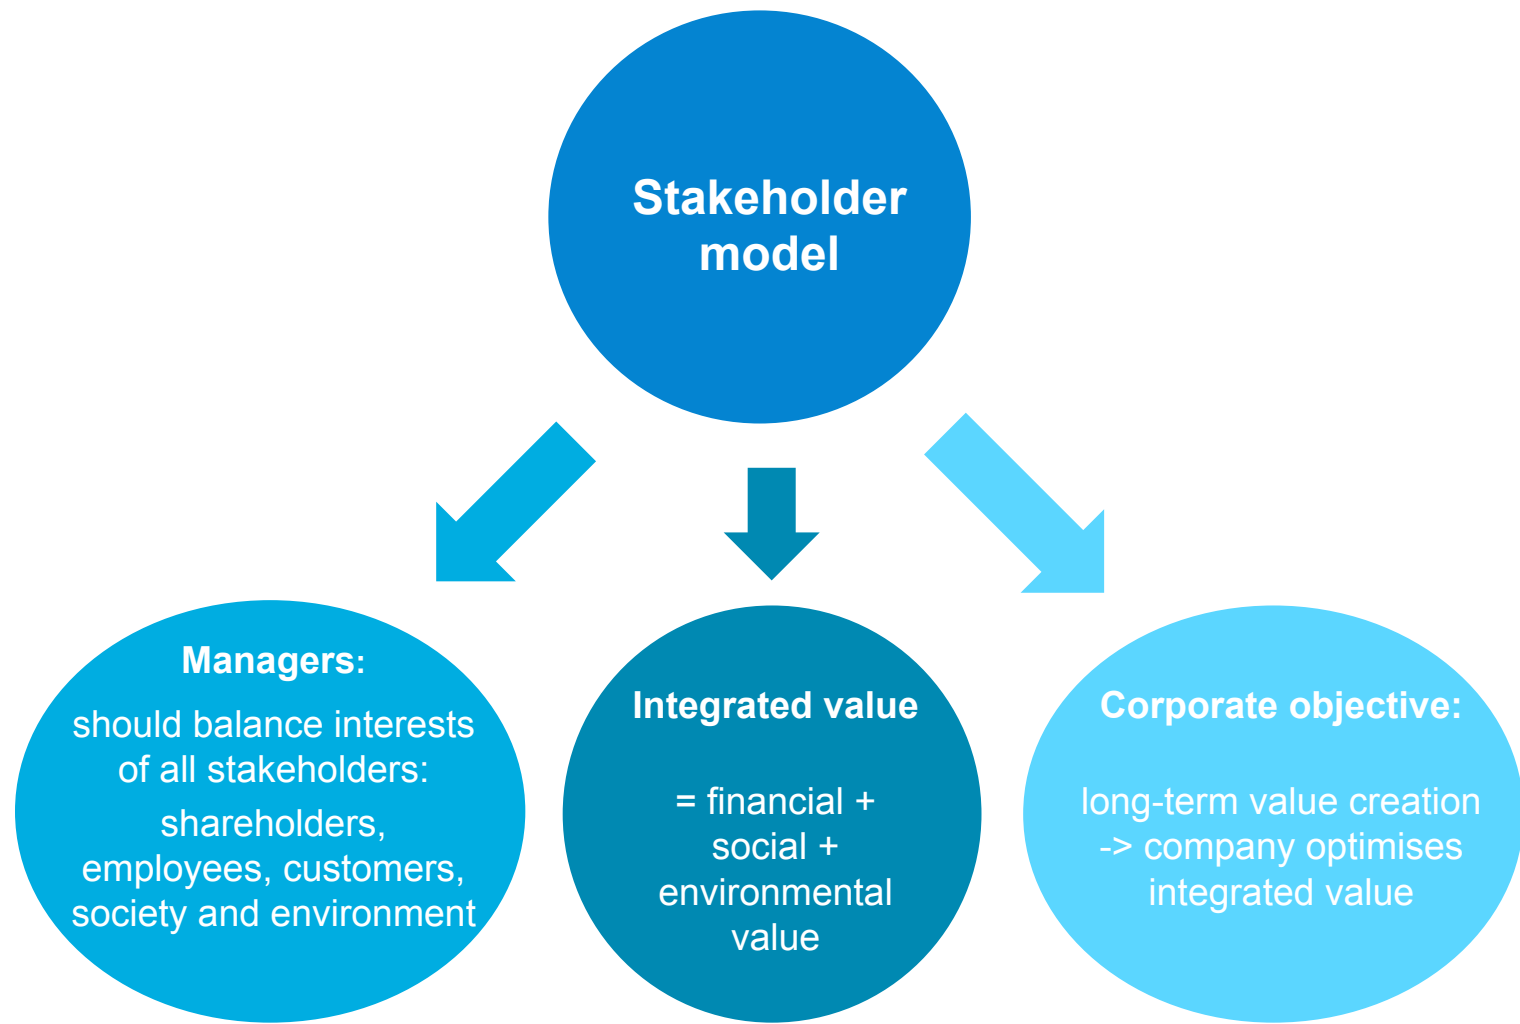

- **Corporate governance:** stewardship and engagement
- Need to include social and environmental dimensions
- From **short-term** to **long-term**

# Objective of the corporation

# Shareholder model (SF 1.0)

# Stakeholder model (SF 2.0)

# New business language

Integration of social and environmental dimensions is **dynamic**

- **Anticipation** of regulation / taxation (e.g. carbon tax)
- **Reputation** – pressure from NGOs / consumers
- **Future-proof**: transition to SDGs by 2030 (e.g. Energiewende)

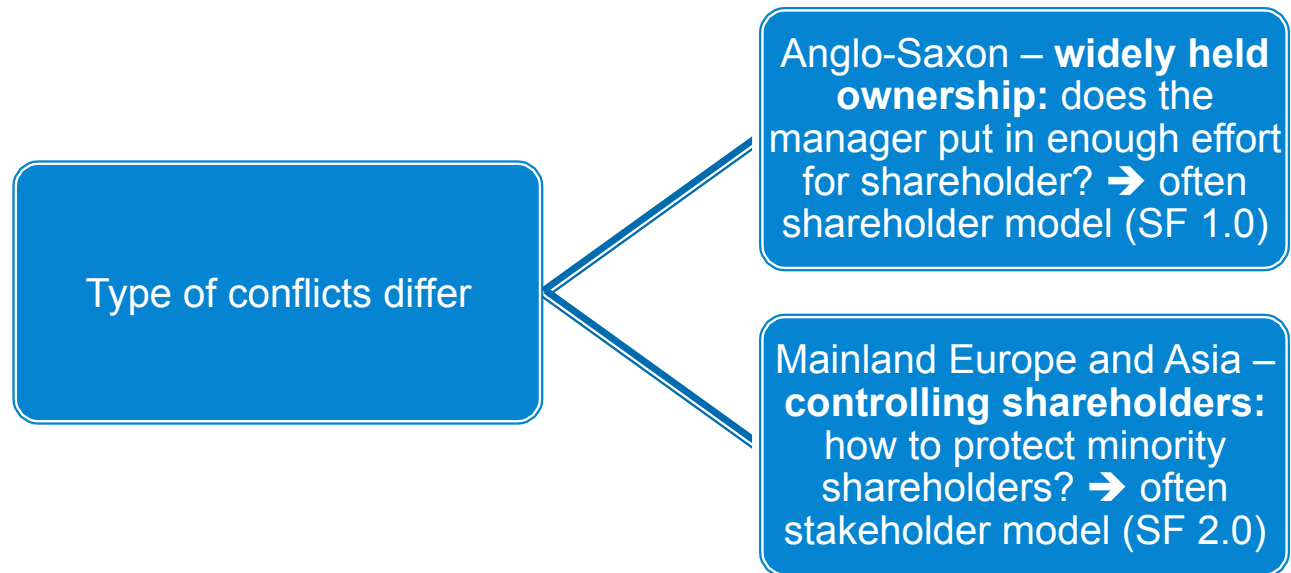

New approaches based on **integrated value** ( $I = F + S + E$ )

- Impact of  $F + S + E$  on **value drivers of business model** (Chapter 5)
- Incorporating  $S + E$  into **NPV rule for investment decisions**
- **Integrated reporting** (Chapter 6)

# Corporate governance

# Corporate governance

Corporate governance deals with **conflicts of interests** between **owners/shareholders** and **managers** of a firm

# Corporate governance & sustainability

Try to get the best of both worlds

- Accountability of shareholder model (take-overs)
- Broad approach of stakeholder model (all stakeholders)
- **Societal test** of take-overs: see next slide

**Fiduciary duty** of investors towards clients/beneficiaries: clarify that sustainability factors must be incorporated

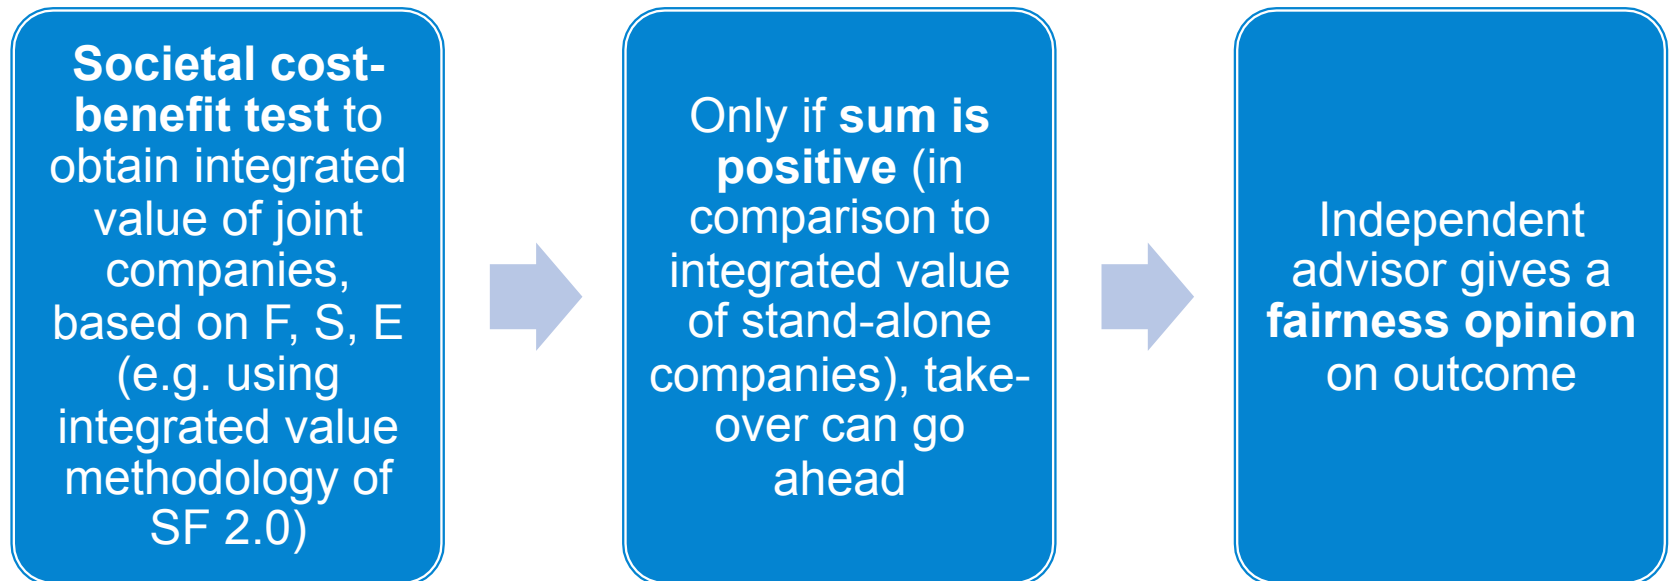

**Engagement** of investors with investee companies: dialogue on broad range of ESG issues (remember externalities are linked to companies)

# Take-over contests

Kraft Heinz (**shareholder model**) vs Unilever (**stakeholder model**)

- Without protection, shareholder model will win → SF 1.0

Proposal:

# Governance models

- ▶ **Executive contracts and compensation:** incorporate sustainability as KPI (key performance indicator)
- ▶ **Type of shareholders:** long-term investors (e.g. pension funds; Ch 4)
- ▶ **Reporting:** integrated reporting (Chapter 6)
- ▶ **Non-executive monitoring:**
  - widen remit of audit committee towards integrated reports, or
  - create sustainability committee: to monitor creation of social and environmental value by management

# Organisational forms

Alternatives to publicly listed company:

**Private company:**  
private equity owner  
appoints management  
and can intervene directly

**Cooperation** (group of  
people like suppliers or  
customers): working for  
mutual benefit (but  
cannot raise fresh equity)

**B corporation:** certified  
company meeting social  
and environmental  
standards (but no legal  
status)

**Social enterprise** with a  
social or environmental  
goal

**Governmental  
organisation** with a  
public objective: run for  
the public good, but profit  
motive (for operational  
efficiency) missing

# Horizon – from ST to LT thinking

# Tragedy of the horizon

**Tragedy of the horizon** (Carney, 2015) is major obstacle to sustainable finance:

- Costs of action are now, while benefits remain in the future
- Impact of social and environmental issues in **long term** ...
- ... but managers and investors operate in a **short-term** framework

# Short-term practices

Quarterly  
financial  
reporting by  
companies

Variable pay  
systems  
based on  
annual results

Monthly/  
quarterly  
benchmarks  
measuring  
investor  
performance

Marking-to-  
market of  
investments

Supervisory  
treatment of  
illiquid  
investments

# Market efficiency and carbon risk

## Efficient markets hypothesis (Fama, 1970)

- ▶ Stock prices incorporate **all relevant information**
- ▶ On average reflect LT fundamental value of firm
- ▶ Stock price is indicator for asset selection and investor performance (Chapter 7)

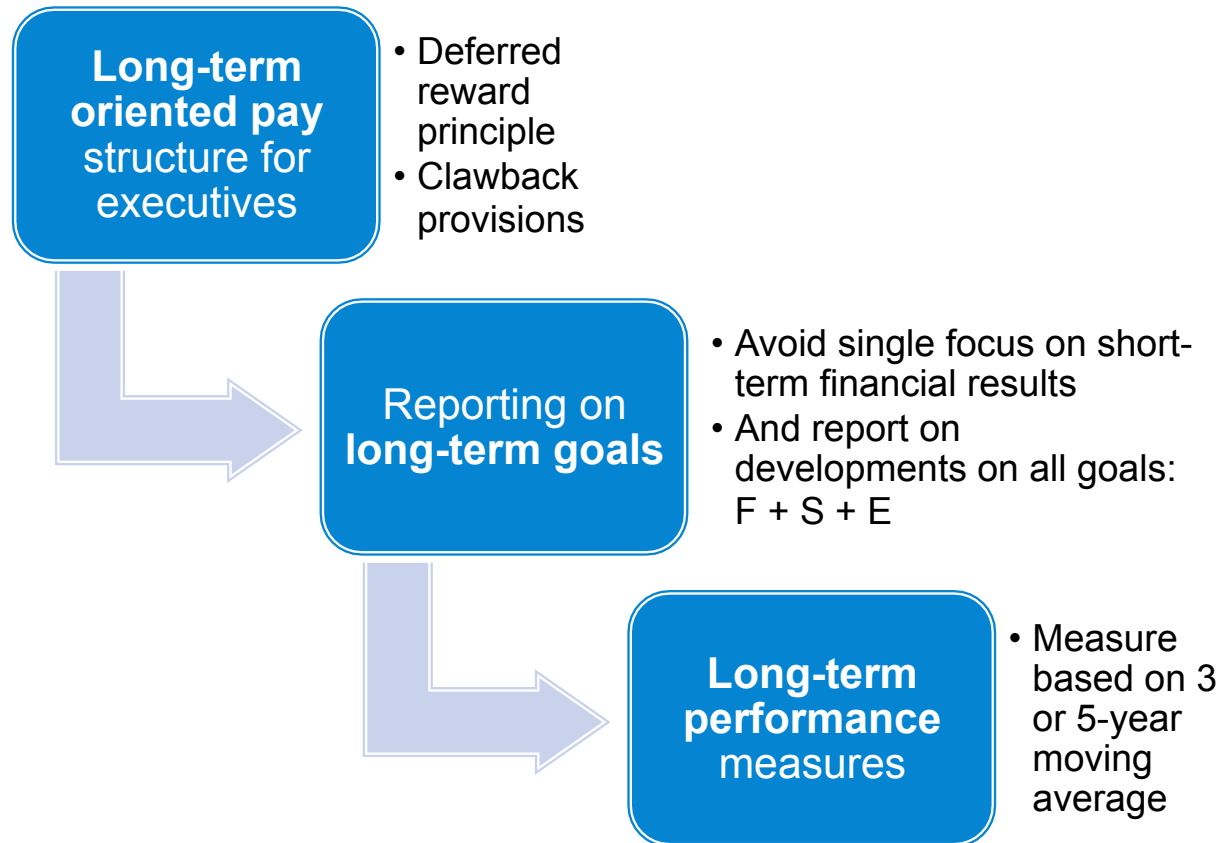

# Market efficiency and carbon risk

## Adaptive markets hypothesis (Lo, 2017)

- ▶ Degree of market efficiency depends on **evolutionary model** of individuals adapting to a changing environment
- ▶ Prices reflect as much info as **number and nature distinct groups** of market participants allow
- ▶ If **small number** of groups or **new risk** → market less efficient
- ▶ Can explain why new risks (carbon) are not yet fully priced

# Mechanisms to reduce short-termism

# Discussion: barriers

What is the most important **barrier** to sustainable finance?

1. Value: **shareholder value** versus **stakeholder value**
2. Horizon: **short term** versus **long term**

# Conclusions

- ▶ **Transition** to sustainable economy
  - Requires overcoming behavioural bias business + consumers
  - Key challenge is to move from ST to LT thinking
- ▶ **Corporate governance** defines focus of firm
  - From shareholder model → financial value (F)
  - To stakeholder model → integrated value ( $I=F+S+E$ )
- ▶ Several **incentives** reviewed
  - New theory: from efficient markets to adaptive markets
  - Longer term reporting and LT executive pay
